

CERES Aqua Beta1 SSF TOA Fluxes - Accuracy and Validation

Top-of-atmosphere (TOA) shortwave (SW), longwave (LW) and window (WN) channel fluxes are determined using Edition2B-TRMM Angular Distribution Models. These Edition2B-TRMM Angular Distribution Models were also used to determine TOA fluxes for the Terra Edition1A SSF data set. Users are, therefore, asked to see the [Terra Edition1A SSF section on CERES TOA Fluxes - Accuracy and Validation](#).

This data set is NOT regarded as publishable and will not be maintained in the archives.

We invite users to report any problems observed with this product.
