

# AVAPS Dropsonde Report for ACTIVATE

## Spring and Summer Campaign 2021

Updated R1: 20230131

### Contact Information:

PI: Lee Thornhill ([kenneth.l.thornhill@nasa.gov](mailto:kenneth.l.thornhill@nasa.gov)) NASA Langley Research Center, Science Systems and Applications, Inc.

Data Manager: Claire Robinson ([claire.e.robinson@nasa.gov](mailto:claire.e.robinson@nasa.gov)) NASA Langley Research Center, Science Systems and Applications, Inc.

### Dropsonde Operators:

Taylor Shingler (NASA LaRC)

Shane Seaman (NASA LaRC)

David Harper (NASA LaRC)

Claire Robinson (NASA LaRC, SSAI)

### NCAR Support:

Holger Vömel ([voemel@ucar.edu](mailto:voemel@ucar.edu))

Mack Goodstein ([mack@ucar.edu](mailto:mack@ucar.edu))

Any questions, comments, or concerns with the sonde data can be directed to the PI and/or the DM. Users are strongly encouraged to consult with the PI and/or DM for data usage. More information about individual sondes is available in the header of each data file.

### For R1 Data:

All soundings were reprocessed from raw data. The details of this processing are described in Vömel et al. (2023): Dropsonde observations during the Aerosol Cloud meTeorology Interactions oVer the western ATLantic Experiment, Scientific Data, submitted.

Most changes compared to release R0 are minor and it is not expected that studies are required to use the updated data set.

Release R1 contains more data compared to the previous releases.

New users of the ACTIVATE dropsonde data should use release R1.

The most significant difference to the earlier release R0 are:

\* All soundings processed with the same ASPEN version (3.4.7)

\* Almost all profiles contain more data closer to the aircraft (on average 700 m more data).

- \* Twenty three soundings were added to the archive, which had not been included in the initial data release. Test flight soundings were also included in this release.
- \* Vertical wind speed were bias adjusted and noise to due pressure sensor removed.  
The vertical wind data field is called "Wwind" instead of "Ascent".  
Studies using vertical winds must use the vertical wind speed estimate of release R1.  
See Vömel et al. (2023) for details on the vertical wind calculations.
- \* The precision of latitude and longitude was increased from 2 decimals to 6 decimals.
- \* All parameters may see insignificant changes in values due to updates in smoothing and filtering.
- \* Data files contain a few additional metadata fields, in particular launch latitude, longitude, and altitude.
- \* For a few soundings the launch time and launch lat/lon was updated.  
The correct launch time is part of the metadata and may be inconsistent with the file name (see Vömel et al. for additional information).  
The date stamps in the filename between release R0 and release R1 are consistent.
- \* Four soundings have significant changes in the reported pressure after a missing offset correction was applied

## Overview

This dropsonde reports encompasses the flights for the second year of the Aerosol Cloud meTeorology Interactions oVer the western ATLantic Experiment (ACTIVATE) campaign. For information on the first year of deployment, please refer to the ACTIVATE dropsonde report for 2021 available at [https://www-air.larc.nasa.gov/cgi-bin/ArcView/activate\\_2021](https://www-air.larc.nasa.gov/cgi-bin/ArcView/activate_2021). ACTIVATE conducted two deployments in 2021, the first deployment conducted from February-April 2021 (Spring) and the second deployed from May-June 2021 (Summer). The Airborne Vertical Atmospheric Profiling System (AVAPS) was mounted on the NASA King Air (UC12) and utilized the NCAR NRD41 mini sondes for the duration of the mission. A total of 251 sondes were launched for both deployments, with 100 sondes launched in the winter deployment and 151 launched in the summer deployment. Sonde release strategies were determined on a flight-by-flight basis. There were three commonly conducted flight tracks; a “statistical survey” (out to a certain point and back), a “process study” (a circle of sonde launches around a determined point), and a “satellite overpass” (flying under the satellite track, dropping sondes along the path). There was also a flight track that would exit out one corridor, fly in a triangle or “loop”

and enter the corridor (either same or different), creating a loop to study cold air outbreak conditions (For this document, the track is referred to as a “Cold Air Outbreak Loop” but there is probably another name used by the science team). When not in Cold Air Outbreak conditions, this flight pattern is referred to as “loop”. Table 1 contains information about each flight including the number of sondes launched, the transit path taken, and the approximate direction the sondes were launched after transit. Please note that since this is the second year of the mission, the Flight Number continues from the previous mission. Since the UC12 was not flying for some of the early flights due to maintenance issues, the flight number starts at RF 44 instead of the expected RF 41. More information about the flight strategies can be found in the flight reports on the archive.

Table 1. Summary of Sondes for the ACTIVATE, Spring and Summer 2021 Campaign

Flight #	Day (YYYYMMDD)	# Sondes	ZIBUT or OXANA	Direction after Corridor	Flight Type*

\*Flight Type: SS, statistical survey; PS, Process study; SO, satellite overpass; CAOL, Cold Air Outbreak Loop

## Sonde Performance

Overall, sonde performance was optimal for the duration of both campaigns. Table 1 highlights the overall performance parameters for the sondes during both campaigns. For sonde performance of each individual sonde, please refer to the header for each sonde data file.

Table 1. Overview of Sondes for ACTIVATE, Spring and Summer 2021 Campaign

	Spring Deployment	Summer Deployment
Total Number of Sondes	100	151
Fast Falls	1	2
Ascent Issues	0	1
Time Sync Issues	0	5
Lost Telemetry	1	2

## Fast Fall

There was a total of three occurrences during the two deployments where the sonde encountered a “fast fall” scenario, one in the Spring and two in the Summer. Fast Falls occur when a sonde fails to deploy the parachute. No meaningful data could be recovered from the sondes and they are not part of the archive. All other sondes from both campaigns had successful parachute deployments and transferred data down to the surface. Table 2 has the information for the fast fall sonde and the information can also be seen in the table displaying all sondes for both campaigns.

Table 2. Fast Fall Sonde Information

Sonde #	Flight #	Sonde ID	Release Date (YYMMDD)	Note
183	RF046	190530084	210220	Fast Fall
292	RF067		210519	Fast Fall
405	RF090	194250504	210628	Fast Fall

## Ascent Calculation Error

During the Spring deployment, ascent data for the sonde (variable name: Ascent) was added to the archived data. One sonde contained incorrect ascent data and the ascent data for that sonde was removed from the archived data until it could be further examined. Table 3 contains the sonde in question. All other data outputted by the sonde in question should be correct and is present in the archive. This sonde should also be marked in the header. Please contact the PI and/or the DM with any questions regarding this sonde.

Table 3. Ascent Calculation Error Sonde Information

Sonde #	Flight #	Sonde ID	Flight Date (YYMMDD)	Time (HHMMSS.SS)	Lat	Lon	Alt
319	RF073	194240045	210526	143837.87	36.975442	-71.265958	8963.12

## Time Sync Error

There were times in the Spring deployment where the computer clock and the time in the AVAPS software were not in sync. When this happened, sondes would not transmit the sonde data properly to a format that was easy to read by the QC program (ASPEN). When this occurred, sonde data had to be recovered using the decoded binary files. This work was completed by Holger Vömel at NCAR. This created uncertainty in the launch time for these sondes. Table 4 includes the sondes that suffered from the time sync issue. The issue was prevented by ensuring that the computer time and the time in the AVAPS program were synced.

Table 4. Time Sync Error Sonde Information

Sonde #	Flight #	Sonde ID	Flight Date (YYMMDD)	Time (HHMMSS.SS)	Lat	Lon	Alt
379	RF084	194320899	210616	151626.31	38.743931	-74.088593	8641.59
380	RF084	171350514	210616	160337.42	36.996609	-70.962036	8838.50
381	RF084	194240048	210616	160543.42	36.993141	-71.076103	8840.71

383	RF084	194240254	210616	173147.63	36.938171	-75.649841	8770.56
379	RF084	194320899	210616	151626.31	38.743931	-74.088593	8641.59
380	RF084	171350514	210616	160337.42	36.996609	-70.962036	8838.50
381	RF084	194240048	210616	160543.42	36.993141	-71.076103	8840.71

### Lost Telemetry

There were three sondes that lost telemetry after being dropped for unknown reasons. These sondes are not on the archive. These “Lost Telemetry” sondes are noted in Table 5.

Table 5. Lost Telemetry Sonde Information

Sonde #	Flight #	Sonde ID	Flight Date (YYMMDD)	Time (HHMMSS.SS)	Lat	Lon	Alt
245	RF058	190640122	210330
